

Real-World Studies for Real-World Decisions: Prospective Observational Studies

*Know what works in
real-world conditions*

Obtain Real-World Data

Observational research helps you link product use to real-world outcomes. Our staff conduct prospective observational studies to obtain real-world data on clinical processes, treatments and disease characteristics.

We conduct a range of such studies to help you understand what patients experience and what works in actual medical practice settings. This experience includes, but is not limited to:

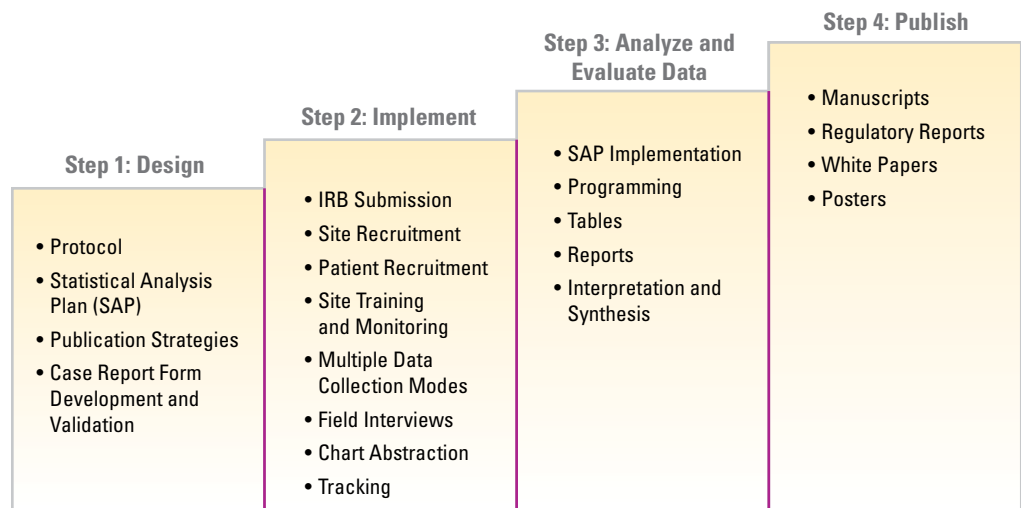

- Patient registries
- Large safety trials
- Patient-reported outcomes studies
- Physician and patient surveys (e.g., REMS surveys)

Tailor the Program

Our experts will help with any or all stages of your prospective observational study. You will receive tailored support during the design, implementation, data analysis and publication stages. This approach ensures that the design meets your objectives. Our tailored studies typically include:

- A multidisciplinary team for design of the protocol and analysis plan
- A scientific advisory board or clinical consultants
- Multiple options for data capture
- Design and testing of patient-reported outcomes instruments
- Patient recruitment and retention strategies
- Project management
- Reports for regulatory submission

Choose any or all of our services to customize your prospective observational study.

To know what happens under real-world conditions you need RTI Health Solutions®

Count on Reliable Data

Our thorough approach ensures that you receive the most accurate outcomes and analyses. Our epidemiologists and statisticians apply the most advanced statistical techniques for observational data.

Some of our data collection and management approaches include:

- Patient recruitment
- Patient interviews
- Computer-mediated methods
- Tracing patients to improve follow-up
- Internet panels
- Patient diaries
- Electronic data capture
- Interactive voice response systems

Customize the Results

Receive your study results in the format you request. Custom deliverables include:

- Study design and protocols
- Recruitment materials
- Detailed analysis reports
- Abstracts, manuscripts, posters and publications

Rely on Our Thought Leaders

Our thought leaders have the insight to meet the special challenges of prospective observational studies. Members of our staff have been recognized for their contributions in this area. This includes pioneering the use of cohort studies and efficient execution of registries that measure the impact of risk management programs. You can rely on our proven experience to meet your needs.

Let RTI-HS Help You
